

THE NYECORR[®] DIFFERENCE

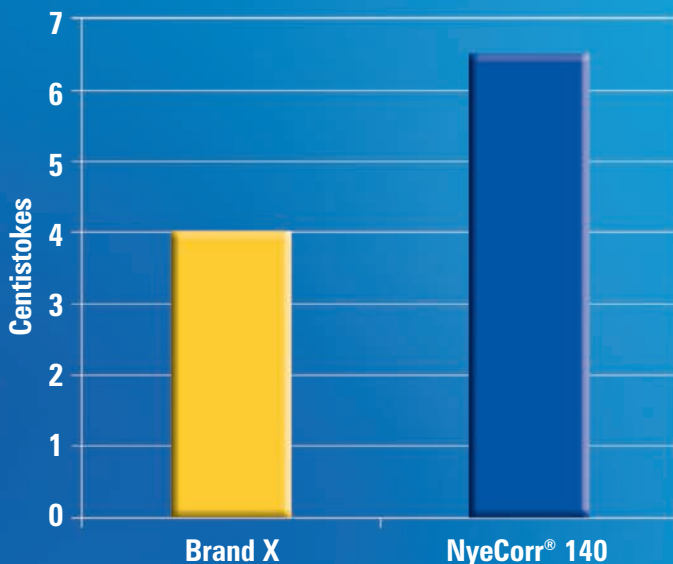

Higher Oil Viscosity (see graph below)

- = thicker film of oil
- = less bearing/race contact
- = less vibration and wear

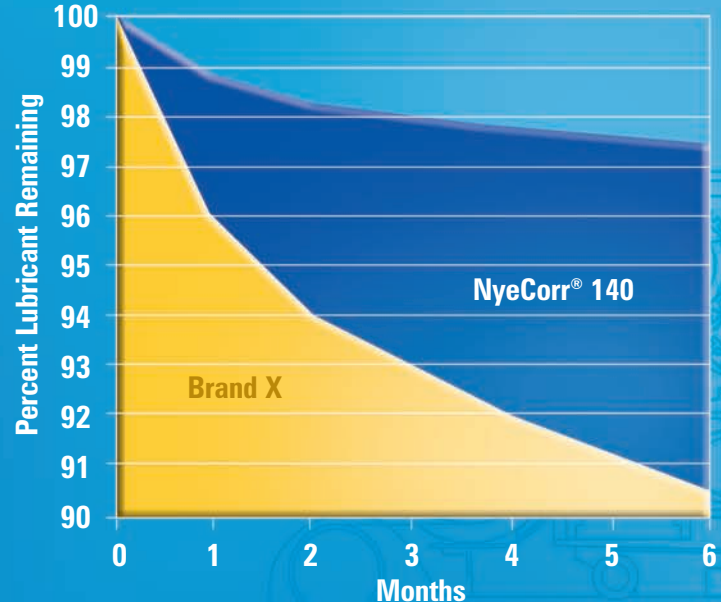

Lower Evaporation = longer life (see graph below)

- Same Chemistry = no waiting until roll change
- Better Corrosion Package = less rust
- Cost Less = save \$\$

Base Oil Viscosity @ 400°F

Percent Retained Oil @ 400°F

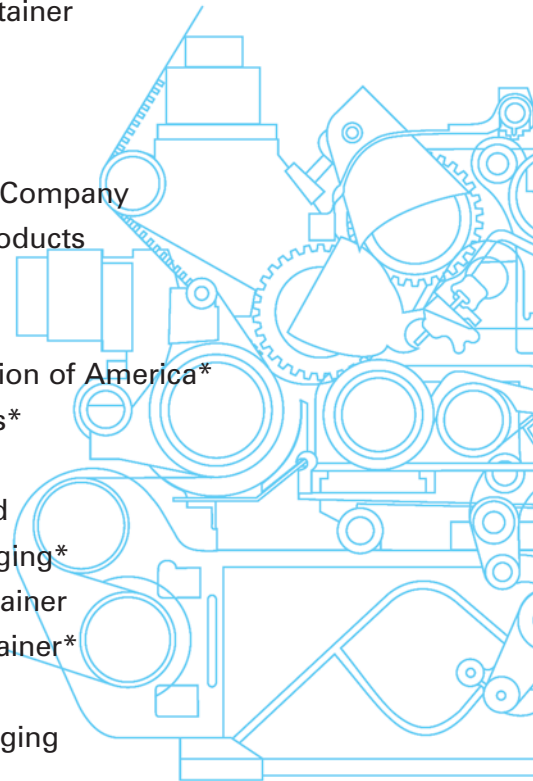

Nearly 200 corrugator plants around the world have converted their singlefacers to NyeCorr® 140. Many of Nye's customers make the move to NyeCorr 140 as a cost savings measure over other higher priced PFPE/PTFE greases. NyeCorr 140 is the same grease chemistry that offers greater performance at a lower cost. These corrugator plants are not only saving money by converting to NyeCorr 140 but they are experiencing longer operating life of their bearings, reduced down time during roll changes, and longer lubrication intervals. Nye Lubricants also provides the fastest customer service and technical support in the industry with same day shipment for orders placed before 2:00 pm. Isn't it time you joined this list of customers and made the "SmartChange" by converting to NyeCorr 140?

NyeCorr® 140 Customers (partial listing as of July 2006)

Atlantic Packaging Products
Bates Containers
Boise Cascade Corporation
Combined Containerboard*
Commencement Bay Corrugated
Corpak Inc.
